UNDERSTANDING THE METHODS

OBD

Reading and writing is done via OBD. Easy, right?

OBD after patch in boot

The engine ECU is removed to process a "patch" in order to unlock operations via OBD. Then, the ECU just needs to be installed back in the vehicle. Reading and writing are then available via OBD.

Boot

The engine control unit is removed and opened. Then reading and writing are available in Boot.

OBD password

The password is read via OBD and the engine control unit is removed. Reading and writing are available in Boot.

Bench

The engine control unit is removed (but not opened). Reading and writing are then available in Bench.

OBD after patch in bench

The engine control unit is removed (but not opened) to process a "patch" to unlock operations via OBD. Then simply install the unit inside the vehicle. Reading and writing are now available via OBD.

Datalog

Connect the Autotuner to the OBD socket, then you just need to start the test to record data. A graph with all measures will be available online.

*BETA

Protocol currently under development only available to beta testers.
